# FOREST PRACTICES PLAN

## A. GENERAL

- Forest Practices Plan (FPP TJW0327) Objective: Road construction will be required in EP021C to allow it to be harvested using ground based machinery as Aggregated Retention; that is, to maintain the influence of adjacent forest of 50% or greater over the felled area. The felled areas will then be regenerated to native forest.
- All operations will be conducted to manage for Moderate- High erodibility soils.
- Forest Practices shall be carried out in accordance with the principles and approaches specified in the 2015 Forest Practices Code (FPC 2015). All Forest Practices Code mandatory statements ("will" statements) apply, whether or not they are referred to below. The specific requirements set out below are also mandatory.
- The Contractor is required to have the following on site during active operations:
  - a copy of the certified Forest Practice Plan, and any subsequent Variation(s)
  - a copy of the current Forest Practices Code
  - a copy of the a copy of the Contractor Photo Guide to Natural and Cultural Values.
- As a measure to reduce the spread of weeds and or pathogens on Permanent Timber Production Zone Land, all Roding, Harvesting and Site Preparation Machinery will be washed down before being transported to this operation and washed down again, prior to leaving this operation. Wash down will be carried out in accordance with the "Tasmanian Washdown Guidelines for weed and disease control".
- Management of fuels, oils, rubbish and emissions will be carried out according to section F of the Forest Practices Code 2015. Any spills that cause or threaten to cause environmental harm will be reported to Forestry Tasmania as soon as possible. Refuelling sites will be located at least forty (40) metres from any water course to minimise the adverse effects on water quality in the event of any spillage and will be surrounded by an earthen bund capable of containing a fuel spill.
- The current "Fire Prevention at Forest Operations" procedure (Forest Industry Fire Management Committee) will be adhered to during all operational phases of this plan.

## B. BUILDING ACCESS TO THE FOREST (ROADING)

*Refer also to Part D. Conservation of Natural and Cultural Values*

- Access to the coupe and new road is via Peak Rivulet Road 1-3 and Peak Rivulet Road 1.
- The standard of equipment to be used in this operation is FPC 2015 C1 Dry & C2 Wet.

### LOCATION

- The attached FPP Map details the approximate location of proposed new road construction.
- The road centre line is marked in the field by RED tape.

### SPECIFICATIONS

- The construction of approximately 0.550 kilometres of Forest Practice Code Class 3 Road.
- Culvert spacing will meet the requirements of the FPC 2015 for Moderate- High erodibility soils. The minimum culvert size will be 375 mm.
- Road building will require full bench construction in the area indicated on the attached FPP map.

### CLEARING AND FORMATION (inc FELLING, SNIGGING and LOGGING EQUIPMENT)

- All trees should be felled into the roadline clearing. Roadline clearing will be kept to a minimum at all times.
- Unless stated otherwise the clearing width for the roadline should not exceed 30 metres. Trees outside this width may be removed if:
  - I. Required to improve sightlines and increase effective road drainage
  - II. Considered to be hazardous, to both road users and the road structureThese trees will be approved by a Forest Officer prior to removal.
- Timber will be landed at the site identified under Part C of this FPP and approximately located as per the attached FPP Map.

Coupe: EP021C

FPP No.: TJW0327

Page 2 of 8

Initials of parties to the Plan	Landowner and Applicant:	<i>DU</i>	FPO:	<i>TW</i>
	Date:	<i>29/3/17</i>	Date:	<i>30/3/2017</i>

- Timber will be landed along the proposed roadline, employing a continuous landing system with stockpiles contained wholly within the maximum clearing width and /or landing site employed under section C.1 of this FPP and approximately located as per the attached FPP map.
- Snig tracks will not be constructed outside the maximum clearing width unless approved by a Forest Practices Officer.
- Where practical, trees will be felled or pushed parallel to the roadline clearing, aiming to minimise the damage to trees outside the maximum clearing width.
- The harvesting contractor will report the presence of seed crops to a Forest Officer.
- Standing trees outside the clearing width will be left free of road clearing debris.
- The standard of equipment to be used in this operation is FPC 2015 C1.

#### STREAMSIDE MANAGEMENT

- If any unmapped watercourse (that does not have specific management prescriptions within the FPP) is encountered, operations are to cease within its vicinity until advice of a Forest Practices Officer has been received.
- Clearing width is to be minimised through the Class 3 SSR.

#### RESTORATION

- Any landing constructed will be temporarily drained for future use.
- The road line formation will be gripped to the standard specified in the FPC 2015 for snig tracks on Moderate- High erodibility soils, if delays, of greater than one week, are expected or experienced after formation and prior to drainage construction.
- Drainage systems including table drains, culverts and trafficable grips will be kept functional at all times during the operation and will be left clear and functioning at the completion of the operation.
- The contractor will inform Forestry Tasmania when restoration works are complete to enable a final inspection to be carried out prior to removing all machinery from the harvest area.

### C. HARVESTING OF THE TIMBER

*Refer also to Part D. Conservation of Natural and Cultural Values*

- Harvest prescription is aggregated retention.
- Harvesting of timber will only occur within the harvest boundary as indicated on the attached FPP Map and as marked on the ground in BLUE tape – responsibility Forestry Tasmania.
- The standard of equipment to be used in this operation is FPC 2015 C1 Dry & C2 Wet.

#### TO HARVEST MANFERNES, DICKSONIA ANTARTICA

- Harvesting of approximately 2000 man ferns will be permitted within the coupe as per the FPP map.
- No harvesting of man ferns will be permitted within Informal Reserves, streamside reserves, Class 4 stream machinery exclusion zones, wildlife habitat strips, wildlife habitat clumps or any other area excluded from harvesting activity.
- If any unmapped watercourse (that does not have specific management prescriptions within the FPP) is encountered, operations are to cease within its vicinity until advice of a Forest Practices Officer has been received.
- No tree fern will leave the harvest area unless tagged with the required fern tags purchased from the FPA.

#### LANDINGS

- One (1) landing is to be employed with approximate location shown on the attached FPP map.

#### SNIG TRACKS

- Snigging will generally follow the directions indicated on the attached FPP map.

#### FELLING

- Trees will not be felled over the harvest boundary unless authorised by a Forest Officer for safety reasons. If this occurs accidentally a Forest Officer will make the decision as to whether the tree will be removed or left in place.
- A Forest Officer will discuss seed requirements with the harvesting contractor. If the specified seed crops are found, the contractor will report this to the Forest Officer as soon as possible.
- Forestry Tasmania staff may need to mark seed trees or sections of coupes to be retained to allow seed crops to mature. These trees will be marked with a spray painted S. If felling of marked seed trees is required for safety reasons, felling must not occur without prior consultation with and consent of the Forest Officer monitoring the operation.

Initials of parties to the Plan	Landowner and Applicant:	<i>DW</i>	FPO:	<i>TW</i>
	Date:	<i>29/3/17</i>	Date:	<i>30/3/17</i>

- Also see section D Cultural Heritage.

### STREAMSIDE MANAGEMENT

- A minimum 10m MEZ will be applied to six (6) Class 4 streams as shown on the attached FPP map.
- The approximate location of designated crossing points are shown on the attached FPP map.
- The most Southern & Northern Class 4 streams within the harvest area will have the stream crossing left in place at the end of harvesting to allow for fireline construction. After construction of the fireline is complete the crossing will be rehabilitated.
- If any unmapped watercourse (that does not have specific management prescriptions within the FPP) is encountered, operations are to cease within its vicinity until advice of a Forest Practices Officer has been received.

### RESTORATION

- All restoration activity will be carried out progressively as sections are completed.
- Snig tracks suitable for future game control will be nominated by a Forest Officer. These tracks will be restored by the harvesting contractor with cross drains that allow the tracks to be easily upgraded for 4x4 bikes or similar. These tracks will be drained as per firebreaks (refer section E1.6 Fire Breaks and Access Tracks FPC 2015).
- The contractor will inform Forestry Tasmania when restoration works are complete to enable a final inspection to be carried out prior to removing all machinery from the harvest area.

## D. CONSERVATION OF NATURAL AND CULTURAL VALUES

*Prescriptions to manage flora, fauna, geomorphic, cultural heritage, landscape and soil and water values*

### FLORA

- No special management prescriptions required.

### FAUNA

#### Wedge Tailed Eagle and White Bellied Sea-eagle

- The Forest Officer in charge of the operation must ensure that contractors can recognise an eagles nest prior to the start of an operation.  
Contractors must be instructed to notify the Forest Practices Authority via the Forest Officer in charge of the operation if any nests are found during the operation, and the following seasonally-based guidelines should be applied;
  - If a nest is discovered during the management constraint period (July to January inclusive), cease all forestry activity within 500 m of the nest, or within 1 km if in line of sight of the nest.
  - If a nest is discovered outside the management constraint period (February to June inclusive), cease all forestry activities within 500 m of the nest.
- The management constraint period may be extended to include the month of February during a late breeding season at the instruction of the Forest Practices Authority.

#### Masked owl

- If a suspected nest or roost site is located within the operational area during operations, operations should cease within 100 m of the site and notify the Forest Officer in charge of the operation as soon as practical. Nests are usually located in large trees with large hollows/spouts, and may have evidence of use (e.g. pellets of regurgitated skin and bones; feathers; droppings) at the base of the tree (within the canopy drip-zone). Roost sites can be associated with similar habitat features but may also occur in understorey shrubs with dense canopies (e.g. native cherry, she oaks, banksia in dry forests) or rocky outcrops with overhangs, ledges and caves. Such sites may also show evidence of use.

#### Grey Goshawk

- If suspected nesting activity (e.g. displaying male birds) is observed or a nest is found, operations must cease within 100 m of the suspected nest site and notify the Forest Officer in charge of the operation as soon as practical. A specialist survey may be required to confirm the identity of the nest and determine the area of habitat surrounding the nest site that should be considered for long-term retention ('nesting location reserve').

#### Swift Parrot

- Report immediately to the Forest Officer in charge of the operation any evidence of Swift Parrot nest site and/or Swift Parrots being present (heard or seen) inside or within 500 m of the operation during September to February.

#### Spotted-tailed Quoll, Eastern Quoll & Tasmanian Devil

Coupe: EP021C

FPP No.: TJW0327

Page 4 of 8

Initials of parties to the Plan	Landowner and Applicant:	<i>DW</i>	FPO:	<i>TW</i>
	Date:	<i>29/3/17</i>	Date:	<i>30/3/17</i>

- If a suspected den is found, operations must cease within 50m of the suspected den site and notify the Forest Officer in charge as soon as practical.

#### Mt Mangana stag beetle

- Road building through the Class 3 Stream SSR, the clearing width should be no greater than 20m wide & remaining road-line up to a total of 30m wide.
- Road building through Class 3 stream SSR the clearing width has been field marked with blue flagging tape

#### Aggregate Retention

- The remaining area of the coupe is shown as a Constraint as shown on the attached FPP map.

#### Reporting new sites for threatened fauna and flora

- If new sites for threatened fauna (e.g., raptor nests, devil dens etc.) or flora are found during the implementation of a forest practices plan, the sites must be reported to the Forest Practices Authority as soon as practical.

### EARTH SCIENCES

- No prescriptions required.

### CULTURAL HERITAGE

- 10m MEZ will be applied to the internal Hauler line. Shown on attached FPP map as Archaeological constraint.
- 10m MEZ will be applied to machinery parts. Scattered along the Archaeological constraint & marked in the field in red white striped tape. No artefacts are to be removed from their current location.
- Approximate locations of designated crossing points are shown on the attached FPP map.
- The contractor will notify the Forest Officer responsible for monitoring this operation in the event that any new site is located during the course of the operation.
- Any site found during the operation will be excluded from the operation until advice is obtained from the Forest Practices Authority.

### LANDSCAPE

- No prescriptions required

## E. ESTABLISHING AND MAINTAINING FORESTS

*Refer also to Part D. Conservation of Natural and Cultural Values*

### ESTABLISHMENT

- Forestry Tasmania is responsible for reforestation under this Forest Practices Plan.
- The coupe will be regenerated according to the Forestry Tasmania Standard Operating Procedure for Native Forest Establishment and Stand Maintenance.
- The most Southern & Northern Class 4 streams, which dissect the harvest area, will have the streams crossings left in place at the end of harvesting to allow for fireline construction. After construction of the fireline is complete the crossing will be rehabilitated.
- Where applicable a mineral earth firebreak may be constructed around the harvest boundary.
- Mechanical preparation of fuels may occur within the harvest area to ensure burn and regeneration objectives are met.
- The contractor will inform Forestry Tasmania when site preparation is complete to enable a final inspection to be carried out, prior to removing all machinery from the operational area.
- Any burn to be carried out following completion of harvesting will be conducted in accordance with an approved burn plan
- Species proportion for the planned area is *E. obliqua* 95% - *E nitida* 5%.
- The coupe will be aerially sown with eucalypt species in approximately the same proportion that existed at the time of the harvesting operation. A minimum of 10% of each eucalypt species present on the coupe pre harvest should be collected from the coupe or surrounding coupes. The balance should be collected from Seed Zone L18.

### PROTECTION OF GROWING STOCK

- Insect, frost damage and weed competition will be monitored and appropriate action taken where necessary.

Coupe: EP021C

FPP No.: TJW0327

Page 5 of 8

Initials of parties to the Plan	Landowner and Applicant:	<i>OW</i>	FPO:	<i>TW</i>
	Date:	<i>29/3/17</i>	Date:	<i>30/3/17</i>

- The area covered by this Forest Practices Plan is not covered by a Fire Management Plan. Measures to be taken to provide protection of the new forest from fire are contained in Forestry Tasmania's Southern Region Fire Action Plan.
- The area will be monitored for browsing and action taken as required by the landowner.
- Browsing transects will be established to monitor germination or browsing losses.
- Browsing control may be carried out if monitoring indicates high risk and unacceptable levels of damage. Procedures will be in accordance with the Forest Operation Plan for Mammal Browsing Control and guidelines contained in Forestry Tasmania's Technical Bulletin 11 Monitoring and Protecting Eucalypt Regeneration.

**ASSESSMENT FOR REFORESTATION**

---

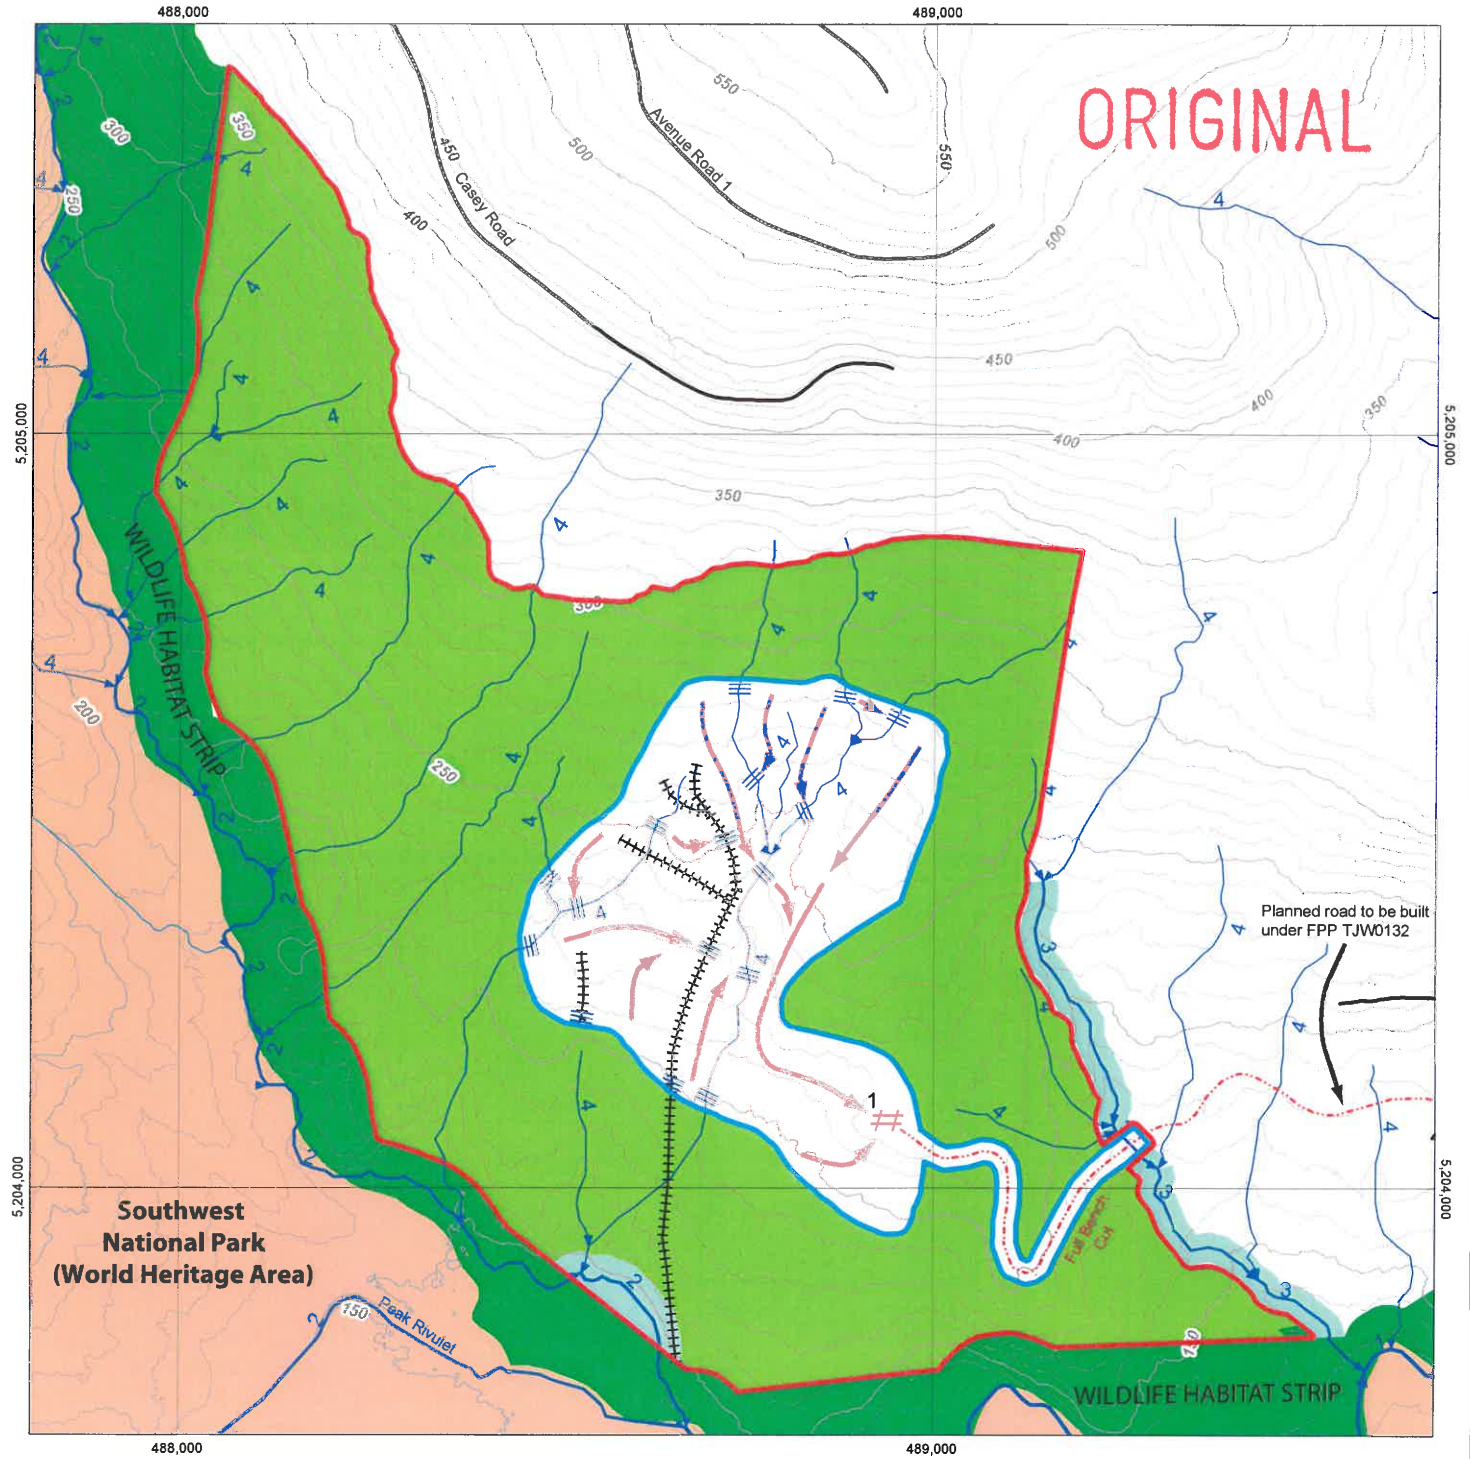

- A regeneration survey will be conducted within two years of the completion of the operation.
- Stocking will at least be the minimum specified in Technical Bulletin 6 Regeneration Surveys and Stocking Standards.
- Survival of regenerated areas will be monitored and appropriate action taken if stocking falls below an acceptable level.

**Forest Practices Officer (Planning)**

Forest Practices Plan TJW0327 certified by:

Name:	[REDACTED]		
Signature:	[REDACTED]	Date:	30/3/2017

Pursuant to a delegation from the Forest Practices Authority under section 43 of the Forest Practices Act 1985.

**Acknowledgment of persons/organisations in relation to Forest Practices Plan Number TJW0327****Landowners Consent**

I am the owner of the land or the authorised agent of the owner of the land referred to in the attached Forest Practices Plan Number TJW0327 and have given my approval for the plan to be submitted to the Forest Practices Authority for certification under section 19 of the *Forest Practices Act 1985*. I understand that, under section 25C of the *Private Forests Act 1994*, if I am a private landowner, I may be required to pay a levy to Private Forests Tasmania based on the nett area of forest operations under the plan.

Name	[REDACTED]	Company or other entity	for Forestry Tasmania
Address	79 Melville Street, Hobart Tasmania 7000	Telephone	[REDACTED]
Signature	[REDACTED]	Date	29/3/17

**Acknowledgment of Applicant**

I submit the attached Forest Practices Plan Number TJW0327 to the Forest Practices Authority and apply for its certification. I acknowledge that I understand the provisions of the plan, and that I am responsible for ensuring that the plan is complied with unless otherwise stated in the plan. I understand that I am responsible for the lodgement of interim compliance reports with the Forest Practices Authority within 30 days of the completion of each discrete operational phase\* under the plan; and further, for the lodgement of a final compliance report with the Forest Practices Authority within 30 days of the expiry of the plan. I understand that under sections 18(4A) and 18(4B) of the *Forest Practices Act 1985*, I must pay a prescribed application fee at a time, and in a manner, determined by the Authority.
